Full Stack Developer experienced in Angular, .NET, and Python, with a strong passion for Generative AI and building LLM-powered applications.

EXPERIENCE

Full Stack Developer

Aug 2023 – Present

Yardi

Pune

- Tech Stack: Angular, AngularJS, .NET, JavaScript, TypeScript, MySQL, RESTful APIs, WebSockets (SignalR), Kafka, NetAppS3, AmazonS3, Bootstrap, Docker
- Designed, developed, and maintained reusable components within a core angular and dotnet framework supporting 70+ products.
- Engineered an Inter-Application Notification System using SignalR, Kafka, and Docker, with JWT authentication, improving real-time communication between distributed modules.
- Successfully migrated a legacy AngularJS application to Angular 19, improving performance, maintainability, and developer experience.
- Integrated Amazon S3 functionality into the UI, enabling seamless file operations (update/upload/download/delete) directly from the application.

PROJECTS

LapMaker: AI Driver Coach | *React, Tauri, Python (Flask), LLM, LangGraph, RAG, ChromaDB*

- Engineered a cross-platform desktop application that analyzes racing simulator telemetry and delivers personalized, AI-powered driver coaching.
- Built a Python Flask backend that captures real-time telemetry from simulator-shared memory, extracts optimal laps, and generates detailed turn-by-turn feedback using local LLMs enhanced by Retrieval Augmented Generation
- Integrated ChromaDB and nomic-embed-text for semantic memory, allowing the AI coach to retain and reference past session feedback for contextual, evolving advice.
- Designed a React + Tauri frontend for a fast, native-like UI with visualizations like track maps, lap replays, and multi-channel telemetry charts.
- Implemented persistent feedback history and session tracking using SQLite

NLQ: Natural Language Querying | *FastAPI, Next.js, TypeScript, SQLAlchemy, Ollama, NLP*

- Built a full-stack app to query PostgreSQL, MySQL, SQLite, and MSSQL databases using natural language.
- Developed a FastAPI backend that connects to user-specified databases, introspects schema, and uses Ollama (LLaMA 3.2 / Gemma3) to generate dialect-specific SQL queries.
- Implemented prompt engineering and context logic for accurate, secure SQL generation.
- Used SQLAlchemy for dynamic schema extraction and secure cross-database query execution.

RealityScope: AR for Education | *Unity3D, Blender, Vuforia, C#, Android, Augmented Reality*

- Developed an interactive Android application that transforms 2D textbook diagrams into immersive 3D AR models to improve comprehension of complex engineering concepts.
- Used Unity3D as the core development platform to integrate 3D assets and user interactions.
- Integrated Vuforia SDK for real-time image tracking and AR marker recognition within the mobile application.
- Programmed object behaviors and interactions in C#, enabling dynamic visualization of 3D components.

TECHNICAL SKILLS

Languages: C/C++, Python, C#, MySQL, MSSQL, TypeScript, JavaScript, HTML, CSS

Frameworks: Angular, AngularJS, React, Next.js, Bootstrap, .Net, Express, FastAPI

Platforms & Tools: AWS S3, NetApp, Git, Docker, TFS, Kafka, VS Code, Visual Studio, PyCharm, Jupyter

Development Practices: Agile, Scrum, CI/CD, Test Automation - Checkmarx and Mandiate

Libraries: Ollama, RxJS, GSAP, WebGI, LangChain, SignalR, Dapper, SQL Bulk Copy, Pandas, NumPy

EDUCATION

University Of Pune

Aug. 2019 – May 2023

Bachelor Of Computer Engineering

CGPA : 9.04
