+91-7030221134 | [shriyashkadam6@gmail.com](mailto:shriyashkadam6@gmail.com) | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Software Engineer with **3 years of experience** in **C#, .NET, ASP.NET Core, Entity Framework, Microservices, and Angular**, specializing in building scalable, high-performance enterprise applications with innovative solutions, and Gen AI applications using LLMs and RAG.

## TECHNICAL SKILLS

---

**Languages:** C#, C++, Python, JavaScript, SQL, HTML, CSS

**Frameworks:** .NET, ASP.NET Core, Entity Framework, Angular, AngularJS

**Tools:** Kafka, Redis, AWS, PostgreSQL, MS SQL Server, MySQL, Git, Docker, Postman

**Coursework:** OOPs, Data Structures & Algorithms, DBMS, Operating Systems, Microservices, Gen AI, LLMs, RAG

## EXPERIENCE

---

### Software Development Engineer-2

Aug 2023 – Present

*Yardi Software*

*Pune*

- **Tech Stack:** Angular, AngularJS, .NET, JavaScript, TypeScript, MySQL, REST APIs, WebSockets (SignalR), Kafka, NetApp S3, AWS S3, Bootstrap, Docker
- Developed and maintained reusable Angular and .NET framework components supporting **70+ enterprise products**, improving consistency across teams.
- Engineered a secure inter-application notification system using SignalR and Kafka with JWT **authentication**, enabling sub-second communication across **distributed modules**.
- Migrated a legacy AngularJS application to Angular 21, improving page load performance by about **40%** and enhancing long-term maintainability.
- Developed a scalable **microservice** leveraging **Redis** for distributed caching and task state management, enabling efficient handling of asynchronous workflows and reducing latency in high-frequency operations.
- Built a consolidated, context-aware translation system that aggregates multiple translation files from AWS S3, provides a UI for on-screen manipulation, enforces client, product, and global translation constraints, and **reduced translation rollout time by more than 95%**, enabling same-day updates across clients.

## PROJECTS

---

### LapMaker: AI Driver Coach | *React, Tauri, Python (Flask), LLMs, LangGraph, RAG, ChromaDB*

- Developed a cross-platform desktop application analyzing **10,000+ telemetry samples per session** to deliver AI-powered driver coaching.
- Implemented a Flask backend to ingest real-time telemetry streams, processing **100+ data points per lap** and generating turn-by-turn feedback using local LLMs with RAG.
- Integrated ChromaDB and vector embeddings to persist session memory and enable contextual feedback across **20+ historical sessions**.
- Created a React + Tauri frontend with track maps, lap replays, and multi-channel telemetry visualizations.

### NLQ: Natural Language Querying | *FastAPI, Next.js, TypeScript, SQLAlchemy, Ollama*

- Programmed a full-stack application enabling natural language queries across PostgreSQL, MySQL, SQLite, and MSSQL databases.
- Designed a FastAPI backend to introspect database schemas and generate dialect-specific SQL using LLMs.
- Applied prompt engineering and validation logic to reduce invalid or unsafe SQL generation by **60%**.
- Used SQLAlchemy for secure, parameterized cross-database query execution.

### RealityScope: AR for Education | *Unity3D, Blender, Vuforia, C#, Android*

- Created an Android AR application transforming **15+ 2D textbook diagrams** into interactive 3D learning models.
- Leveraged Vuforia SDK for real-time image tracking and AR marker recognition with **<1 second latency**.
- Authored interactive object behaviors in C# to enable user-controlled 3D visualization.

## EDUCATION

---

### University of Pune

*Bachelor of Computer Engineering*

Aug 2019 – May 2023

*CGPA: 9.04*
